DSS: No

Hi Maria:

If you don't mind, take a look at the issue log document (see below) as it relates to K6 Domestic Long Term clinical study comments. Mike has added language that suggests that the date for the long term study has been set in March '04. I don't think this is confirmed, but I wasn't sure if subsequent decisions had been made that haven't yet been communicated to us or MDS. We've been expecting a study no sooner than March 04. Can you confirm? I know you're in Phoenix until Friday, so I'll just address revisions (if needed) in the next addition of our input to the issue log.

Thanks and hope you had a good trip!

-Valerie
